APPLICATION FOR PERMIT UNDER POLLUTION CONTROL ACT, 1967 (Effluent)

Preamble—The Fraser Valley Milk Producers Association has been discharging uncontaminated cooling water at the present location since the establishment of the plant in 1919. The trade-waste effluent was connected to the municipal sewer system on June 15, 1972, when sewers were installed. The uncontaminated cooling water is mixed with overflows from the private water-supply dams, with spring water overflows, and with storm water runoff before it is discharged, thereby cooling the effluent prior to discharge. The following application for a permit is a matter of formality.

THIS APPLICATION is to be filed with the Director, Pollution Control Branch, Parliament Buildings, Victoria, B.C. Any person who qualifies as an objector under section 13 (2) of the *Pollution Control Act, 1967* may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or, where service is required, within 30 days of the serving of a copy of the application, file with the Director an objection in writing to the granting of a permit, stating the manner in which he is affected. Those who do not so qualify may file with the Pollution Control Board

an objection in writing under section 13 (6), in the same manner and time period as described above.

Fraser Valley Milk Producers Association, of Box 9100, Vancouver, B.C. V6B 4G4 (6800 Lougheed Highway, Burnaby), hereby applies to the Director for a permit to discharge effluent from Pacific Milk Plant—Delair (Abbotsford), evaporated milk production only, located at 1799 Riverside Road, Abbotsford, into a stream flowing into Marshall Creek, which flows northeastward and discharges into Sumas River, and gives notice of application to all persons affected.

The land upon which the works are located is Parcel A, the southeast quarter of Section 16, Plan 7844.

The discharge shall be located at 1799 Riverside Road in the vicinity of Garage Building, under Riverside Road.

The quantity of effluent to be discharged is as follows: Average annual daily discharge (based on operating period), 500,000 imperial gallons (estimated). Maximum daily discharge, 500,000 imperial gallons (estimated).

The operating period during which the effluent will be discharged is intermittent operation, 3 to 4 days a week; average.

The characteristics of the effluent discharged shall be equivalent to or better than uncontaminated cooling water only. Maximum temperature at source, 34°C. At in-plant manhole, 15°C, at which point overflow from water supply dams and natural spring water mix with cooling water.

The type of treatment to be applied to the effluent before discharge is none other than natural cooling through mixing with dam overflows and natural ground waters.

I, B. D. Jamieson, Secretary-Treasurer, hereby certify that a copy of this application has been received by the Central Fraser Valley Regional District.

This application, dated on the 12th day of November 1976, was posted on the ground in accordance with the Pollution Control Regulations.
